The cooperation of supposedly separate senses of touch and kinaesthesia is an old and controversial problem in psychology (Gibson, 1966). It has been reformulated by Gibson in terms of a perceptual subsystem, haptic touch, and the problem then becomes one of defining the information in a combined input from the skin and the joints.

### Senses Considered as Perceptual Systems: Amazon.co.uk ...

A perceptual system is a computational system (biological or artificial) designed to make inferences about properties of a physical environment based on senses. Other definitions may exist. In this context, a scene is defined as information that can flow from a physical environment into a computational system via sensory transduction.
